

PIXIE®

Coop 33 (cov)

Pixie® is a 90% red, scab resistant apple.

Fruit

- **Maturity** : End of August, beginning of September, Golden -10.
- **Colour** : Red to dark-red, washed, coloration on 3/4 to 4/4 of the apple.
- **Form** : Regular; lightly long shaped.
- **Presentation** : Very attractive, very insensitive coloration with contrasting white flesh. Pixie has a good skin quality without any russet.
- **Size** : Regular; most 70/80. Average weight 0,175 Kg .
- **Flavour** : Sweet, 13°Brix, juicy, strong flavour.
- **Harvest** : In 1 to 2 picking rounds. Pixie isn't sensible for pre harvest drop of and brushing.
- **Conservation** : In normal storage 3 to 4 month. More investigation is necessary to give us more information about the best storing conditions.
- **Diseases** : Scab resistant; not attractive for aphids.

Tree

- **Vigour** : Modestly, easy tree, with a small number of pruning hours.
- **Productivity** : Early production, high average yields, more than 50T/HA is possible.

Flowering

- **Flowering period** : Like Golden Delicious.
- **Pollinators** : Golden Gem, Beaugene, Sprenger, Gala, Golden.
