

ROAT

(cov)

Roat (cov) King Red Delicious® is a strain from Hapke Red Delicious with a very intensive colour.

Fruit

- **Maturity** : Like other Red Delicious strains, some days after Golden, half of September.
- **Colour** : Intensive dark red coloration on almost the total production. No unwell coloured apples, extremely high pack out.
- **Presentation** : Form typically Red Delicious.
- **Size** : Roat has an average size of 80 mm.
- **Conservation** : Very good. Roat can be stored until January in normal storage and in CA until the end of June.
- **Harvest** : The harvest of Roat will start some days after the beginning of the Golden harvest, with a picking window of two weeks. The variety is not sensible for pre harvest drop of, and the extremely intensive coloration makes it possible to pick Roat in one time.
- **Disease** : No special problems compared to other Red Delicious strains.

Tree

The tree is à easy grower without any special problems. In the most situations it will be necessary to use rootstock EM9 or EMLA.

- **Vigour** : Moderated if the production is regular.
- **Productivity** : Good productions from upon the beginning.

Flowering

- **Flowering period** : Like Golden
- **Pollinators** : Golden Gem, Beaugene, Sprenger, Gala, Granny Smith...
